

Installing Your Device

Find your device port

All 1996, and newer, passenger vehicles have a port.

Common locations for the device port:

- Below or around the steering column
- Behind a removable panel on the dashboard
- In the middle console behind a removable cover or tray
- In or around the glove box
- Under the passenger side dash

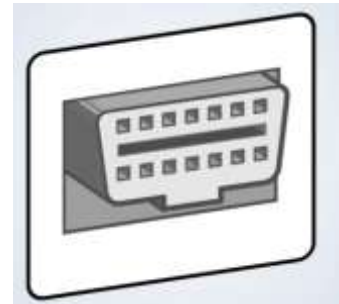

Before installing the device

1. Ensure your vehicle is turned off.
2. If you have difficulty bending over, you may wish to seek assistance for installing the device.

Install the device

1. Locate the port on your vehicle.
2. Line up the device with the port and slide firmly into place.
3. The device will have one or more lights that turn on and off upon installation.
4. Wait 1 minute before turning the vehicle on.

Important notes

- There may be more holes in the port than pins on the device. This is normal.
- The port may have a protective cap that must be removed before installing the device.
- Velcro may be used to fasten a hinged panel if the panel will not close with the device inserted.
- You may wish to remove your device and store it in a secure place when the vehicle is taken for service or maintenance work.
